Disinfecting during COVID-19

How Can You Safely Disinfect When You Have a Septic System?

This past year COVID-19 impacted our lives in many ways. The stress on your household wastewater treatment systems is not to be disregarded.

Treatment plants use the pretreated wastewater to track rising cases across the country, which sounds terrifying when you consider the possible effects on your household. The good news is that COVID-19 is particularly susceptible to disinfection. However, using an abundance of cleaning materials can disrupt the naturally forming bacteria in your system which will impede your treatment of wastewater.

What can I use to safely disinfect my home?

Use the items listed below for cleaning and disinfecting, they are safe for your septic system:

- Borax: 1/2 cup in a gallon of water
- Baking Soda and Vinegar
- Bar Soap without Antibacterial Additives

Make sure to keep your products free of dyes, scents, preservatives and phosphorous

Why Choose **MACK INDUSTRIES**?

- Locally Owned and Operated.
- Experienced Technicians.
- Provide maintenance and repairs, not just inspections.
- Over 50 years of experience installing and designing Sewage Treatment Systems.
- Norweco and Jet Distributors.

Remember, Prevention is the best form of defense!
